## International Mathematical Talent Search - Round 5

Problem 1/5. The set $S$ consists of five integers. If pairs of distinct elements of $S$ are added, the following ten sums are obtained: 1967, 1972, 1973, 1974, $1975,1980,1983,1984,1989,1991$. What are the elements of $S$ ?
Problem 2/5.
Let $n \geq 3$ and $k \geq 2$ $\begin{array}{llllllll}\text { be integers, and form the } & 1 & 3 & 9 & 27 & 81\end{array}$ forward differences of the members of the sequence

$$
1, n, n^{2}, \ldots, n^{k-1}
$$

| 1 |  | 3 |  | 9 |  | 27 |  | 81 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 2 |  | 6 |  | 18 |  | 54 |  |
|  | 4 |  | 12 |  | 36 |  |  |  |
|  |  |  | 8 |  | 24 |  |  |  |
|  |  |  |  | 16 |  |  |  |  |

and successive forward differences thereof, as illustrated on the right for the case $(n, k)=(3,5)$. Prove that all entries of the resulting triangle of positive integers are distinct from one another.
Problem 3/5. In a mathematical version of baseball, the umpire chooses a positive integer $m, m \leq n$, and you guess positive integers to obtain information about $m$. If your guess is smaller than the umpire's $m$, he calls it a "ball"; if it is greater than or equal to $m$, he calls it a "strike". To "hit" it you must state the correct value of $m$ after the 3rd strike or the 6 th guess, whichever comes first. What is the largest $n$ so that there exists a strategy that will allow you to bat 1.000 , i.e. always state m correctly? Describe your strategy in detail.
Problem 4/5. Prove that if $f$ is a non-constant real-valued function such that for all real $x, f(x+1)+f(x-1)=\sqrt{3} f(x)$, then $f$ is periodic. What is the smallest $p$. $p>0$, such that $f(x+p)=f(x)$ for all $x$ ?
Problem 5/5. In $\triangle A B C$, shown on the right, let $r$ denote the radius of the inscribed circle, and let $r_{A}, r_{B}$, and $r_{C}$ denote the radii of the circles tangent to the inscribed circle and to the sides emanating from $A, B$, and $C$, respectively. Prove that

$$
r \leq r_{A}+r_{B}+r_{C}
$$
