Framings and operators

Framings, as considered in

P. G. Casazza, D. Han, and D. R. Larson, Frames for Banach spaces, in *The functional and harmonic analysis of wavelets and frames* (San Antonio, TX, 1999), *Contemp. Math.* **247** (1999), 149-182,

extract the essence of frames. I intend to show a way of generating frames by means of operators (based on joint work with Dave Larson).
