
REBECCA MCKAY, University of New Brunswick - Saint John

University mathematics education is always changing but maybe in the same ways

Based on my experience teaching at a small Atlantic Canadian institution, in this talk, I will highlight some drivers of change and describe a few of these changes in recent years. What is notable is that many of the changes are just an evolution of previous changes and challenges. Then I will provide some ideas of how I will move forward in this ever-evolving teaching landscape.
