Insights from the MAA Study of College Calculus

Since 2009, the Mathematical Association of America has conducted a series of studies of mainstream Calculus across the United States. For the first five years, *Characteristics of Successful Programs in College Calculus* (NSF #0910240) undertook a large-scale survey of students and instructors in Calculus I with follow-up case study visits to 18 of the colleges and universities that had interesting and promising programs. We have just been funded for an additional five years for an expanded study, *Progress through Calculus* (NSF #1430540). This will be an overview of what we've found so far and what we hope to accomplish.
