*Explain the Method - The Use of Video Assignments for Pre-service Teachers*

During the Winter semester of 2015, I decided to incorporate video assignments for the mathematics course I was teaching for the early and middle years pre-service teachers. Students selected one of three topics and explained the mathematics behind the computational algorithm in a short instructional video. In this talk I will discuss the assignment structure in more depth, give student exemplars, and describe some of the successes and struggles of implementing such an assessment.
