
CATHERINE ROBERTS, College of the Holy Cross
Creating a Climate of Inclusion

Our college is enjoying and benefiting from increasing numbers of first-generation students and students of color. A visit to our campus by Dr. Uri Treisman inspired our faculty to do more to support these students in their transition from high school to college mathematics. This presentation will describe some of the direct and indirect actions our department is implementing to engage students in this important transition. The speaker will reflect on what she has learned from mentoring and teaching first-year students, many of whom have gone on to study mathematics. Better email for this topic: croberts@holycross.edu
