CARMEN BRUNI, University of Waterloo
On the Ethics of Social Computing for Computer Science Majors

In the rapidly evolving field of computer science, the intersection of technology, society, and human behaviour presents both immense opportunities and complex ethical challenges. As computer science majors, students must not only learning how to build systems but also how their actions effect the environments in which millions of people interact with. This talk will explore a course taught at the University of Waterloo concerning the ethical implications of designing and developing technologies that impact societies.
